

## Rabbit Control - Trapping Techniques

### Course Details

- Title: Rabbit Control - Trapping Techniques
- Type: Training Course

Our comprehensive Rabbit Control - Trapping Techniques course is aimed at learners who wish to develop their skills in controlling rabbits using physical methods. The training will give you the knowledge to be able to plan and carry out rabbit control. It will provide you with a full working knowledge of both preventative and curative methods to be able to plan, implement and monitor a control programme that is appropriate to the specific situation using efficient and safe methods and with due regard to the environment.

The training will cover the biology of rabbits providing an understanding of the reasons why they need to be controlled, legislation associated with rabbits that you need to be aware of when controlling them, the types of nonchemical methods available to control rabbits and when it would be appropriate to use each method, this will be encompassed with practical activities during the training.

The training is suitable to learners new to trapping rabbits or anyone who wishes to develop their skills further in the techniques used to trap rabbits effectively.

This is an assessed course, on successful completion you will receive a certificate of training from a nationally recognised awarding organisation.

Anyone wishing to use metallic phosphides (aluminium phosphide) should take The Safe Use of Aluminium Phosphide for Vertebrate Pest Control training and Level 2 Award in The Safe Use of Aluminium Phosphide for Vertebrate Pest Control.

### Who is it for?

Our comprehensive training is aimed at anyone who wishes to control rabbits using physical methods either commercially or as an interest.

This training will appeal to people in agriculture, horticulture, sports management and related industries where rabbits may pose a nuisance causing damage to crops and turf.

### What will you get from it?

Identify rabbits and the typical symptoms of the damage caused.

Identify the degree and source of the infestation for rabbits.

State the legislative obligations and responsibilities relevant to the control of rabbits.

Describe the lifestyles, habit and habitats of rabbits.

Plan, implement and monitor an effective control programme for rabbits.

Select and carry out the most appropriate methods of rabbit control, in line with current legal guidelines and recognised good practice.

Ensure that all control operations safeguard humans, creatures, plants and the environment.

### The things you need to know:

**Duration:** 0.5 Day

**Delivery method:** Classroom/Practical

**Max no of learners:** 8
